Where Do Our Trees Go After Planting Day?

**1.5B +
TREES
PLANTED
ANNUALLY**

Kenya target to achieve
15Billion by 2030

**10%
TREE
SURVIVAL
RATE**

According to the Kenya
Forest Service, when
monitoring and follow-
up are not done, tree
survival rates can drop to
below 10%

**NO TREE
MONITORING
& TRACKING**

After planting, many
trees are never tracked
again — contributing to
high loss.

RESULT: Massive tree mortality, wasted investments, and lost climate impact

CarbonTally

CarbonTally is a digital, community-driven tree monitoring platform that transforms traditional tree planting into a data-driven, transparent, and accountable process.

Real-time tree monitoring

Impact reporting

Centralized Digital System for
tree planting & Monitoring

Transparency & Accountability in
tree planting

Data driven planning

Community Digital Tree
Ownership

CarbonTally turns tree planting into measurable, trackable, and transparent conservation impact

USER WORKFLOW

IMPACT AND FEASIBILITY

Higher tree survival:

Continuous monitoring improves care, reduces losses, and strengthens restoration outcomes.

Community empowerment: Local monitors participate actively, gaining ownership and skills.

Trust & transparency: Donors, counties, and organizations can verify where trees are planted and how they perform.

IMPLEMENTATION AND SCALING
